#### **AEL answers the call**

In May this year AEL received a call. We have a storage pond to line and cover in New Plymouth, do you do this sort of thing? Have you got materials on hand and will you finish the job before you leave site and move to another job?

AEL, Yes, we do this work all the time, Materials are not a problem (5000 sqm of HDPE liner and 5000sqm of cover material) and yes, the job will be completed before we start another job.

Customer, "We have a shipment of molasses on its way, so the pond must be finished by 20th June, can you do this?" AEL, "Well yes, subject to weather of course."

Fast forward - Despite wind and rain (typical in Taranaki this time of the year) and the earthworks completed, we started laying liner on 10th June, and we completed the project on time. Molasses was being pumped into the pond and it flowed like a stream of molten lava under the cover towards our team just as they were completing the last welds.

We thank Winton Stock Feed for trusting AEL to carry out this work, also to the dedicated AEL installation crew for another great job.

Whilst AEL were busy in Taranaki, Nelson Lindsay, director of Winton Stock Feed had another of AEL's installation teams working on a dairy effluent upgrade project in Southland.

Unfortunately, two previous liners had failed in a relatively short time, (not AEL installations) due mainly to poor installation and methodology leading to leakage and a non-compliant effluent pond.

This project had tight time restraints due extreme wet weather. With many years of experience, combined with skilled installers and management,

AEL is well equipped to overcome such issues. So, when a window of good weather presented itself, combined with a commitment from the AEL team a replacement (3rd) lining system was completed on time, within budget and most importantly, leak free. We thank Nelson and his sons for their assistance and the trust that AEL would deliver another successful project.

Come and see us at the Effluent Expo 27-28<sup>th</sup> Nov 2018, Mystery Creek - Stand 38
